

# FORM.COM DATA EXPORT CAPABILITIES

## Standard Data Export Options

<b>Excel .xls</b>	<ul style="list-style-type: none"> <li>Export row data as labels, values or both; summary report and links to unique responses can be included.</li> </ul>
<b>Comma delimited .csv</b>	<ul style="list-style-type: none"> <li>Export row data as labels, values or both; summary report and links to unique responses can be included.</li> <li>Can be imported back into current or similar formats.</li> </ul>
<b>XML Schema .zip with .xml/.xsd</b>	<ul style="list-style-type: none"> <li>Exporting produces two XML files: surveys.xml and responses.xml.</li> <li>Surveys.xml contains 4 tables that describe the structure of your forms and surveys.</li> <li>Responses.xml contains tables with data concerning respondents and their answers to questions.</li> <li>Each of the files are accompanied by an .XSD file that describes the data format for the XML files.</li> </ul>
<b>SPSS Statistics .sav</b>	<ul style="list-style-type: none"> <li>Export row data as labels, values or both. Labels and values can be toggled for multi-choice question types.</li> <li>20+ encodings available.</li> <li>SPSS version 16.0 or higher is required.</li> </ul>
<b>Portable Document Format .pdf</b>	<ul style="list-style-type: none"> <li>Convert summary reports into black and white or color PDF.</li> <li>Both portrait and landscape orientations are available. Responses.xml contains tables with data concerning respondents and their answers to questions.</li> <li>Each of the files are accompanied by an .XSD file that describes the data format for the XML files.</li> </ul>

- Data export can be scheduled and automated so the system will place files of any format into an indicated S/FTP location on a regular basis.
- Both “Completed” and “In Progress” responses can be included in the data export.
- Question text, answer options, and column headers can be customized, hidden, or filtered to only export the required data.
- Filters can be based on any combination of data or submission dates.
- API calls return data as OOP objects.
- Along with collected data, responses, and distribution statistics, you can also export tasks and account audit logs.

## Advanced Data Export Options

<p><b>Plugins</b></p> <p><i>Applied directly to the form once, then triggered upon form submission.</i></p>	<ul style="list-style-type: none"> <li>• <b>Remote Data Sender</b> allows you to send specified information to a third party application in the form of an HTTP(S) request (by sending a custom link to a remote URL).</li> <li>• <b>Logical Remote Data Sender</b> allows you to send specified information to a third party application in the form of an HTTP(S) request (by sending a custom link to a remote URL) depending on the data collected in the form.</li> <li>• <b>Remote Data Sender Plugin (XML/JSON)</b> sends a post request that contains data in XML/JSON format to a third party application.</li> </ul>
<p><b>SOAP API</b></p>	<ul style="list-style-type: none"> <li>• Common services for getting data back are Form Design and Form Result Management.</li> <li>• More services and their details can be found <a href="#">here</a>.</li> </ul>
<p><b>Remote Data Retrieval</b></p> <p><i>HTTP(S) requests for remote file exports.</i></p>	<ul style="list-style-type: none"> <li>• Export files in Excel, CSV, XML and SPSS formats.</li> </ul>
<p><b>(S)FTP Synchronization</b></p>	<ul style="list-style-type: none"> <li>• Data export can be scheduled and automated so that the system will send Excel, CSV, XML, SPSS or PDF files into an indicated (S)FTP location on a regular basis.</li> </ul>

	<ul style="list-style-type: none"><li>Local data tables (such as Contact Manager and Data Models) can be maintained (exported and/or updated) through the (S)FTP synchronization.</li></ul>
<b>Custom Synchronization</b>	<ul style="list-style-type: none"><li>Implement custom JavaScript within forms.</li><li>Form.com has its own JavaScript library to help with custom development.</li></ul>

- Multiple plugins can be set up on a single form, then triggered in response to different data combinations.
- For API usage, a combination of the Respondent Id Saver and Remote Data Sender plugins helps create unique IDs and synchronize them with your database in real-time.
- A JavaScript section is open and available on the application account side.
